**FOR IMMEDIATE RELEASE**

## SpectralWorks AnalyzerPro™ Software used by DHMRI for Metabolomics Research

**Kannapolis, NC, February 24, 2010** -- SpectralWorks Limited ([www.spectralworks.com](http://www.spectralworks.com)), a software development company in the UK, has recently supplied the David H. Murdock Research Institute ([www.dhmri.org](http://www.dhmri.org)) with their AnalyzerPro™ software.

Located at the North Carolina Research Campus in Kannapolis, NC, DHMRI uses a high performance computing environment for the analysis of large metabolomics datasets. "The inclusion of this software platform in our metabolomic workflow allows us to rapidly integrate data from our various instrumentation platforms both inside and outside the core," said Amr Ragab, manager of DHMRI's metabolomics laboratory. AnalyzerPro has already been used for the unbiased detection and identification of metabolites in MS data at the institute.

Scott Campbell, Director of SpectralWorks, says, "This continues to show the development and adoption of our vendor neutral data processing package as a key tool in the field of metabolomics."

### **About the David H. Murdock Research Institute**

The David H. Murdock Research Institute was established as a public charity to support groundbreaking research at the intersection of agriculture, nutrition, and human health sciences at the North Carolina Research Campus. Funded through a private grant by David H. Murdock, DHMRI hosts the world's top talent and resources to promote transdisciplinary scientific collaboration with academia, government, and industry.

### **About SpectralWorks Limited**

SpectralWorks Ltd is a leading UK based software development company. They are dedicated to providing innovative solutions targeted for markets within the life sciences industry and have strong working relationships with a number of the major instrument manufacturers. Coupled with their collaborations with academia and industry, they have the right balance between scientific and software development expertise to provide the best scientific solutions for the end user. In addition to a wide range of mass spectrometry software products, they provide highly respected consultancy services. These services are able to cover the complete software development cycle or specific steps within a project life cycle. These services are frequently utilized by instrument vendors and end users that demand the best for their laboratories.
